Auburn University Table Tennis Club (AUTTC) Official Website

Introduction:

Taking the opportunity of designing a final project for COMP6000, Web Application Development, we would sincerely like to develop a website for Auburn University Table Tennis Club. Yufei, as a member and an active player of the club, proposed the idea, and we all agreed to help AUTTC to set up the website.

Having been established for decades and competing countless tournaments, the club does not have an official media to show its achievements. The club is still growing and competing. Numerous titles have been earned for Auburn University by the club. It is necessary for the club to show its achievements and update recent events and news regularly.

Proposal:

The website will be developed for AUTTC as an official website. There will be two components: homepage for all people and administrators' page for administrators to update news.

Requirements:

- Homepage:

  (a) A gallery: to show pictures of members, events, achievements etc.

  (b) Blogs: for all users to read the news about recent events, including all updates of the club, world table tennis news, etc.

  (c) Member list: a list to show all members and their possible information.

- Administrators' page:

  (a) Picture upload: to upload and refresh the pictures showing on homepage.

  (b) Blog editor: to edit all blogs, including update, edit, and remove.

- There should be a database to store administrators' username and password. It will not be necessary to have a registration function for the website. Administrators' username and password will be updated by DBA manually.

The website is supposed to be used for AUTTC, so the quality and functionality required above must be met. If sufficient time is left for the semester, we would like to add additional functions.
